

**DAVIDSON**  
**TILING**

Specialising in the perfect finish

*Warm Floors at the touch of a button*

## ELECTRIC UNDER FLOOR HEATING

**Ideal for Refurbishments**

USED UNDER...

- Ceramic
- Porcelain
- Stone Tiles,
- Wood
- Laminate,
- Carpet
- Vinyl

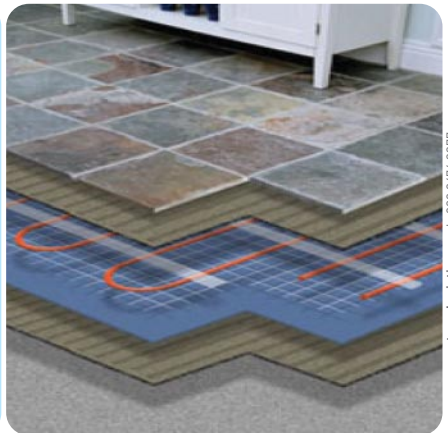

“*Davidson Tiling has always focused on private houses, with a reputation for delivering high standards of craftsmanship.*”

### *How does it work?*

Heating cable is installed within the flexible tile adhesive or thin latex levelling screed.

It is then connected to an electrical supply via digital thermostat, which regulates the floor temperature.

The thermostat, has its own built-in 7 day timer so the system can be programmed to suit your individual requirements.

# Why Electric Under Floor Heating?

## → Economical to run

- Typical power consumption in an average living room or bathroom would be about the same as a couple of light bulbs, and would cost just a few pence per day to run.
- More price stable and increasingly competitive source of heating, while oil and solid fuel prices continue to increase.
- Faster warm up times; compared to water based systems, warm up times can be as fast as 15 to 30 minutes when used in conjunction with our backer board.

## → Tried and tested

- Established over 20 years, with over 2,000,000 installations world wide and more than 100,000 in the UK and Ireland.
- Lifetime Guarantee on heating cable.

## → Ideal for Refurbishment

- Fitted on top of existing concrete floor or wooden floor. No need to dig up sub floors to have it fitted. Result: Less mess, faster installation.

## → Does it affect floor heights?

- 3mm cable used under hard tiled floors, having little effect on floor height.

## → Heating Wood, Laminate, Carpet and vinyl floors

- Carbon Heating film which is only 0.5mm deep can be installed directly below these type of floors, providing, a fast direct-acting heating system, which can replace radiators.

## → Much Faster warm up

- Surface heat is achieved much faster. Heat reaches the surface as soon as 15 – 30 min from switch on, because cables are located closer to the surface. Compared to water based under floor systems being much longer at 3 – 4 hours.

## OTHER SERVICES PROVIDED BY DAVIDSON TILING...

- Bathroom Mirrors - Supplied and Fitted, Incorporated into your tile design.
- Demister for mirrors supplied and fitted.
- Wetroom Solutions and Tanking Service
- Waterjet Cutting – Corporate Logos, Family Crests used on floor or wall designs.
- Sunken Entrance Matting
